Ports

```
AND
(
TCP.Port == 389 or UDP.Port == 389
or
TCP.Port == 3268 or UDP.Port == 3268
or
TCP.Port == 636 or UDP.Port == 636 // SSL
or
TCP.Port == 3269 or UDP.Port == 3269 // SSL
)
AND
```

i configured logging for ldap using the following

```
ldapmodify -Y EXTERNAL -H ldapi:/// <<EOF
```

```
dn: cn=config
```

```
changetype: modify
```

```
replace: olcLogLevel
```

```
olcLogLevel: stats
```

```
EOF
```

For test

```
ldapsearch -x -H ldap://localhost -b "dc=example,dc=com" "(objectClass=*)"
```

- `-x`: Use simple authentication (rather than SASL).
- `-H ldap://localhost`: Connect to the LDAP server on localhost.
- `-b "dc=example,dc=com"`: Specify the base DN for the search.
- `"(objectClass=*)"`: Search filter to find all entries.

Check the log

```
sudo tail -f /var/log/syslog
```

Actual logs

```
ating via systemd: service name='org.freedesktop.Tracker3.Miner.Extract' unit='t
racker-extract-3.service' requested by ':1.86' (uid=1000 pid=2942 comm="/usr/lib
exec/tracker-miner-fs-3 " label="unconfined")

3. System-Wide Logging for All LDAP Activities (via PAM or NSS)

If your system uses PAM or NSS modules for LDAP authentication, you can increase logging verbosity in `/etc/syslog.conf` or `/etc/rsyslog.conf`:

Edit the Syslog or Rsyslog Configuration:

```
sudo nano /etc/rsyslog.conf # or /etc/syslog.conf
```

Add LDAP Logging Directives: Add a rule for capturing LDAP-related events:

```
local4.* /var/log/ldap.log
```

Restart the Syslog Service:

```
sudo systemctl restart rsyslog
```

Monitor the log

```
tail -f /var/log/ldap.log
```

```
root@newASA-Asus:/etc/ldap/slapd.d# tail -f /var/log/ldap.log
